

Winding Wire

WINDING WIRE DIVISION

GEOGRAPHICAL PRESENCE AND KNOWLEDGE OF THE LOCAL MARKETS

The Winding Wire Division belongs to the Liljedahl Group.

In Winding Wire Division is Isodraht (Germany), Dahrétråd (Sweden) and Slaska (Poland).

The Winding Wire Division produces enamelled round wire and stranded flat wire of copper and aluminium. Winding wire is used primarily in motors, transformers and generators. It provides areas of application within infrastructure, in ventilation plants, major home appliances, automotive, aircraft, trains and elevators, to name a few examples.

The Winding Wire Division has strengthened its market position as a supplier to generator manufacturers for the many wind-power plants being built in Europe.

Our customer focus is strengthened by being a part of this dynamic and global group, we are giving our customers access to a strong partner with a 200 000 ton copper and aluminium production capacity. This means that we are able to offer the extra support and capabilities to handle large and worldwide orders, while our local presence and knowledge remain intact.
